Research Activity Overview 2016/17

The West Yorkshire Research and Development team are supporting and delivering the highest standards of NHS-related research. We are hosted by Bradford Districts Clinical Commissioning Group (CCG) and are working on behalf of all the West Yorkshire CCGs. During 2016/17 **56% of general practices across West Yorkshire recruited over 1, 800 participants** into National Institute of Health Research (NIHR) studies.

Over the last few years, despite all the difficulties seen in the NHS, GP practices have been willing to be involved in studies on top of their normal workload. The West Yorkshire Research and Development Team and the Yorkshire and Humber Clinical Research Network have been supporting practices to undertake and embed research into the day to day operation of general practice.

76% of general practices in **Leeds West CCG** have participated in research recruiting **470** participants this year.

Research Activity 2012 – 2017

The information below highlights the research activity by the practice over the last five years.

Year	No. studies	Study Name	Sponsor	Funder	Recruitment	Study Status	Results
16/17	0						
15/16	1	The United Kingdom Aneurysm Growth Study	University of Leicester	British Heart Foundation	1	Open, recruiting	
14/15	1	ASPIRE 2: Action to Support Practices Implementing Research Evidence	University of Leeds	NIHR Programme Grants for Applied Health Research	1	Complete	Awaiting publication
13/14	1	ASPIRE 1: Action to Support Practices Implementing Research Evidence	Univeristy of Leeds	NIHR Programme Grants for Applied Health Research	1	Complete	Awaiting publication
12/13	0						

The West Yorkshire Research and Development team wish to thank you for your support and we would like to build on previous successes and offer more opportunities for practices and patients to become involved in research in 2017/18.

Practice engagement in research helps provide the evidence base in which improvements in care can be made, and enables primary care to keep moving forward.

Thank you
