## The Influence of Progesterone

## **Progesterone Functions**

Secreted mainly in the ovaries
Prepares the body for pregnancy
Supports development of fetus
Initiates menstruation if no pregnancy occurs
Supports bone formation

## Low levels of Progesterone can be associated with

Fertility disturbance
Heavy menstrual bleeding/irregular bleeding
Sleep disturbance
Anxiety
Migraine

## **Taking Micronised Progesterone**

Loss of bone density

Helps keep womb lining healthy
May improve sleep
May improve anxiety
May lessen migraine attacks
May reduce hot flushes
Does not negatively affect blood pressure, may improve it
